📍 6th Floor, Al-Masar Building- Sinaa Street, Baghdad

About Us

At Sanaya Techs, we are committed to pioneering innovative technological solutions that empower businesses to thrive in a digital world. Our team of experts specializes in delivering cutting-edge software development, IT consulting, and digital transformation services tailored to meet the unique needs of each client.

With a focus on quality, efficiency, and customer satisfaction, we strive to turn challenges into opportunities, driving growth and success in an ever-evolving technological landscape. Partner with us to unlock the full potential of your business.

Innovation

Pioneering technological solutions for a digital world.

Quality

Focus on efficiency and customer satisfaction.

Growth

Turning challenges into opportunities for success.

Our Vision

To be a **global leader** in technological innovation, driving the future of digital transformation. We aspire to create a world where businesses seamlessly integrate advanced technology to unlock their full potential.

Global Leadership

Driving innovation worldwide

Future Growth

Unlocking business potential

Sustainability

Achieving long-term success

Our Mission

At SanayaTechs, our mission is to deliver innovative and reliable technological solutions that empower businesses to achieve their strategic goals. We are dedicated to excellence in every project, ensuring that our clients can harness the power of technology to drive growth, improve efficiency, and stay ahead in an ever-evolving digital landscape.

Innovation

Cutting-edge solutions

Reliability

Trusted partnership

Quality in every project

Customer-Centric

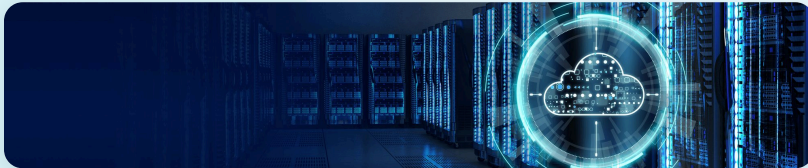

Tailored to your needs

SOLUTIONS

1. Data Center Solutions

Modern organizations need secure, scalable and high-performance data centers that protect business continuity and support growth. SanayaTechs designs and delivers data center infrastructure for enterprise and government clients, from on-premises facilities to edge sites.

We plan power, cooling, fire protection, security, cabling and growth as one system, so the room works as a dependable production environment from day one and expands cleanly as needs grow.

1.1 Fixed Data Center Solutions

Dedicated facilities built to Tier standards for governance and predictable uptime.

1.2 Modular Data Center (MDC)

Pre-engineered rows with power, cooling and containment for phased growth.

1.3 Micro Data Center

A complete data center in one or a few cabinets for branches and edge sites.

1.4 Prefabricated Data Center

Factory-built, IP55 container data centers for outdoor and remote locations.

1. Data Center Solutions

A data center only works when every layer supports the others. Each SanayaTechs project covers the complete set of critical systems:

Power Resilience

UPS, ATS, power distribution and generator integration that keep workloads stable during outages.

Environmental Control

Precision and in-row cooling with hot/cold aisle containment and real-time monitoring.

Physical Security & Safety

FM-200 suppression, fire alarm, CCTV, access control, intrusion detection and PAVA.

Connectivity

High-speed fiber, structured copper cabling, racks and cable management.

DESIGN STANDARDS WE FOLLOW

ANSI/TIA-942

Telecommunications infrastructure standard for data centers: spaces, cabling, power and cooling.

Uptime Institute Tier I to IV

Topology classification for redundancy, maintainability and fault tolerance.

ANSI/BICSI 002 & EN 50600

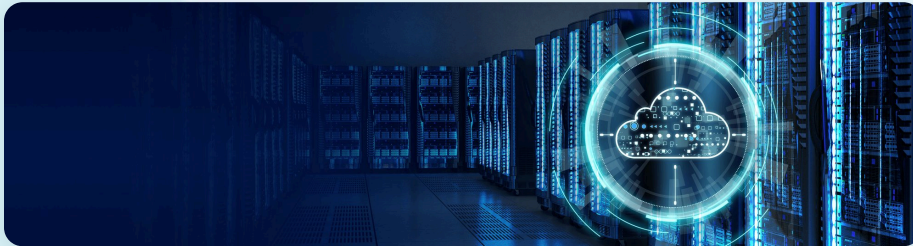

Best practice for data center design, construction and availability classes.

ASHRAE TC 9.9

Thermal guidelines for recommended IT inlet temperature and humidity.

NFPA 75 / NFPA 2001

Fire protection of IT equipment and clean-agent (FM-200) suppression systems.

1.1 Fixed Data Center Solutions

A fixed (traditional) data center is a dedicated room or building that centralizes compute, storage and networking in a controlled environment. It suits organizations that need full ownership, strong governance and predictable uptime. SanayaTechs delivers the complete scope: site survey and design, civil and electrical works, raised floor, power, cooling, fire and security systems, cabling, testing and handover.

Uptime Tier	Topology	Availability	Max. downtime / year
Tier I	Basic capacity, single path	99.671%	28.8 hours
Tier II	Redundant components (N+1)	99.741%	22 hours
Tier III	Concurrently maintainable	99.982%	1.6 hours
Tier IV	Fault tolerant (2N)	99.995%	26 minutes

Raised floor & containment

Modular UPS & ATS

Precision cooling

FM-200 suppression

Access control & CCTV

DCIM monitoring

Data center rooms delivered by SanayaTechs

1.2 Modular Data Center (MDC)

A modular data center integrates power supply and distribution, cooling, cabinets, closed aisle, monitoring and cabling into one pre-engineered row. Modules are factory tested and installed directly in an existing room, so capacity can be added row by row as the business grows. It suits campuses, enterprise server rooms, government, healthcare, education, finance and telecom.

99.999%

System reliability by design

1.30

Average annual PUE

35%+

Energy saving vs. traditional rooms

10 kW

Per cabinet, high density

- In-row precision cooling close to the servers, with sealed hot or cold aisle
- N+X modular online UPS with intelligent sleep mode
- No special machine room needed: installs on concrete or raised floor
- Alerts by SMS, call, e-mail, app and web, with Modbus TCP and MQTT integration

Typical specification (INVT iTalent series)

Cabinet	600/800 x 1200 x 2000 mm, 42U
UPS	Built-in up to 200 kVA, external above 200 kVA
Cooling	In-row air-cooled, 12.5 to 60 kW
Monitoring	Power, environment, video, access, fire linkage
Design basis	TIA-942 and GB 50174

1.3 Micro Data Center

A micro data center places the UPS, power distribution, cooling and monitoring inside a sealed 19-inch cabinet or a single row. Everything is pre-installed and pre-tested in the factory, so a branch, edge or industrial site gets a complete, remotely managed data center without building a dedicated room.

Single cabinet (iSmart series)

- For rooms of 10 to 20 sq m
- 3 or 6 kVA UPS, up to 32U of IT space
- 10.1-inch touch screen, fingerprint and card access
- Commissioning in about 3 hours

Single row (iWit series)

- For rooms of 20 to 60 sq m
- Enclosed hot and cold aisles
- Installed in 4 to 6 days
- Built for harsh sites: mining, oil fields, remote areas

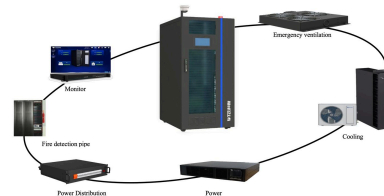

Branches & offices

Edge computing

Retail & banking

Industrial sites

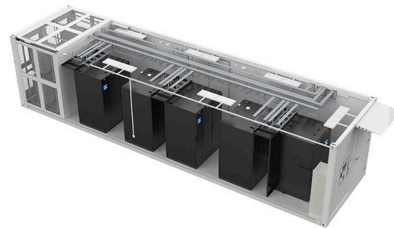

Healthcare

1.4 Prefabricated Data Center

A prefabricated modular data center is built and tested in the factory inside a standard shipping container. Power and distribution, free cooling, cabinets, closed aisle, monitoring and fire suppression arrive as one self-contained unit with IP55 protection, ready to run outdoors. It is ideal where building a data room is slow or impossible: oil and gas fields, remote sites, emergency communications and temporary projects.

- Plug-and-play delivery that shortens project time from months to weeks
- Inverter precision cooling and modular UPS for high efficiency
- Integrated video, access control and fire protection
- Shipped worldwide by sea and land as a standard container

INVT iLegend	20 ft container	40 ft container
IT cabinets	3 (600 x 1200 x 2000 mm)	8 (600 x 1200 x 2000 mm)
Power / cabinet	6 or 9 kW	6 or 9 kW
Total IT load	18 or 27 kW	48 or 72 kW
Modular UPS	40 to 90 kVA	90 to 150 kVA
Input	125 A dual input / ATS	250 A dual input / ATS
Protection	IP55, all-in-one design	

Data Center Solutions: Our Vendors

We build every data center with proven platforms from leading manufacturers, delivered and supported by one SanayaTechs team.

Schneider Electric

UPS, power distribution, racks, cooling and DCIM

Vertiv

UPS, thermal management, racks and monitoring

Huawei

Modular data centers, UPS and digital power

INVT

Modular, micro and prefabricated data centers, precision cooling

Canovate

Cabinets, modular and mobile data center systems

Conteg

Racks, aisle containment and data center cooling

2. Structured Cabling

SanayaTechs delivers reliable, scalable structured cabling solutions for modern businesses. We design and install high-quality systems that support high-speed data, voice, and advanced networking—ensuring seamless connectivity, strong performance, and future-ready infrastructure.

Organized Infrastructure

Professional cabling systems that support current and future network requirements.

High Performance

Fiber optic and copper cabling solutions for reliable data transmission.

Professional Installation

Expert installation and certification to ensure optimal performance and compliance.

Structured Cabling: Our Vendors

Certified copper and fiber systems from trusted manufacturers, installed and tested by SanayaTechs engineers.

Canovate

Copper and fiber cabling, cabinets and accessories

Leviton

Copper and fiber network connectivity systems

Linxcom UK

Structured cabling, patch panels and cabinets

Corning

Optical fiber, cable and connectivity solutions

3. Fire Alarm Systems

SanayaTechs designs fire safety as operational infrastructure, not only as hardware. With our partner Teknim, we deliver addressable, conventional, wireless and monitoring-ready fire alarm systems for reliable detection, fast response and easy long-term management. Our scope covers design, supply, installation, commissioning and monitoring support.

Faster Incident Response

Device-level visibility and central alerts help teams act quickly and with less confusion.

Flexible Deployment

Wired, wireless and hybrid layouts adapt to the building and to phased rollouts.

Operational Continuity

Monitoring software and reliable architecture support compliance and reduce downtime risk.

Commercial buildings

Hotels

Industrial sites

Campuses

Hospitals

Data centers

3. Fire Alarm Systems: Solution Lines

Intelligent Addressable

FlashLink panels with device-level monitoring, network scalability and central control for large, complex sites.

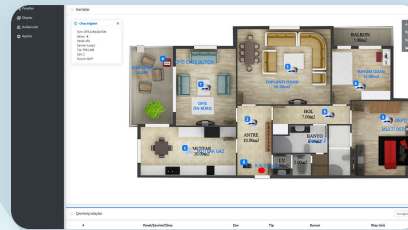

Conventional

Cost-effective, dependable zone-based detection for smaller facilities and simple layouts.

Wireless & Hybrid

Mesh wireless detectors for hard-to-cable areas, extensions and retrofits, mixed with wired loops.

Monitoring Software

Central dashboards with floor-plan views, remote commands and real-time event awareness.

ADDRESSABLE OR CONVENTIONAL

Addressable systems suit large sites because every alarm points to a specific device. Conventional systems suit smaller spaces where budget and simplicity matter most.

DESIGN & COMPLIANCE REFERENCES

NFPA 72

National Fire Alarm and Signaling Code

EN 54

European standard for detection and alarm products

BS 5839-1

4. Physical Security Solutions

SanayaTechs designs, installs and integrates complete physical security systems that protect people, assets and sites. From a single building to a large campus, we combine video, access, intrusion and perimeter protection into one managed solution.

Video Surveillance (CCTV)

See, record and analyze activity indoors and outdoors, day and night.

- IP cameras
- PTZ cameras
- Thermal cameras
- ANPR / LPR cameras
- VMS
- NVR / DVR
- Video analytics & AI
- Perimeter video surveillance

Intrusion Detection

Detect unauthorized entry and alert guards and the monitoring center instantly.

- Intrusion alarm systems
- Door / window sensors
- Motion detectors
- Glass-break detectors
- Panic buttons
- Security alarm panels

Access Control

Decide who enters which door and when, with a full audit trail.

- Door controllers
- RFID / card readers
- Biometric fingerprint
- Face recognition
- Smart locks
- Turnstiles
- Access-control software
- Visitor management

Perimeter Security

Detect and delay threats at the fence line, before they reach buildings.

- Perimeter intrusion detection
- Fiber-optic fence detection
- Microwave barriers
- Infrared beams
- Radar-based detection
- Electric fence systems
- Security gates & barriers

4. Physical Security Solutions

Vehicle & Gate Security

Control and secure every vehicle entry, from parking to high-security sites.

Automatic barriers

Bollards

Road blockers

Sliding / swing gates

ANPR / LPR

Vehicle access control

Parking management

Intercom & Communication

Verify visitors and keep clear voice and video contact at every entry point.

Video door phones

IP intercom

Gate stations

Emergency communication

Help points

Security Command Center

One room to see, manage and respond to every event across all sites.

Central monitoring

Video walls

Security operation centers

HawkTek

Smart security and surveillance solutions

5. Communication Systems (IP PBX)

SanayaTechs designs and deploys IP telephony and unified communications that connect offices, branches and remote staff on one system. We supply on-premise, virtual and cloud PBX platforms, IP phones, gateways and conferencing, with installation, configuration and ongoing support.

IP PBX & UC

On-premise appliance, virtual or cloud PBX with voice, video and chat in one system.

IP Phones

Desk, DECT, video and conference phones for every type of user.

Call Center

Queues, IVR, call recording, wallboards and reports.

Gateways & SIP Trunks

Connect existing lines (FXO/FXS, E1/PRI) and SIP providers to cut call costs.

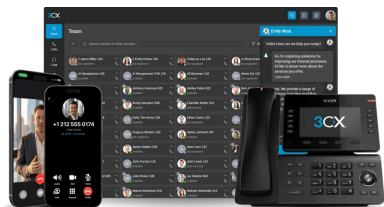

Mobility

Softphone apps so staff use their office extension anywhere.

Conferencing

Audio and video meetings, room phones and web clients.

3CX Phone System with web client and mobile apps

6. Software Engineering

Our software team delivers modern digital products with product thinking, scalable architecture and production-ready execution. We build mobile apps, web platforms, ERP systems and custom software meant to survive real usage, real teams and real growth. The result is not just code: it is a clearer workflow, a usable product or a stronger internal system.

HOW WE DELIVER

1

Problem framing and product scope

2

Interface and architecture design

3

Implementation and integrations

4

Release, support and iteration

6.1 Mobile Applications

iOS and Android apps for customers, field teams and employees.

6.2 Web Applications

Portals, dashboards, workflow systems and e-commerce on the web.

6.3 ERP Systems (Odoo)

Implementation, customization and support of Odoo ERP.

6.4 Customized Software

Systems built around your exact process and integrations.

6.5 AI Solutions

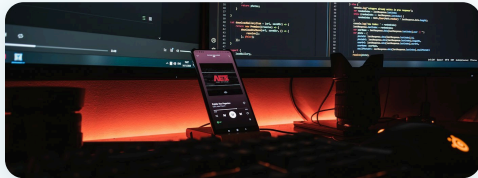

Chatbots, document AI, analytics and video AI for real business use.

6. Software Engineering: Mobile, Web & ERP

6.1 Mobile Applications

Native or cross-platform apps for iOS and Android, designed for daily use.

- Customer apps: ordering, booking, loyalty and payments
- Field and employee apps: attendance, inspections, delivery
- Offline mode, push notifications, maps and camera
- Arabic and English (right-to-left) interfaces
- Publishing on the App Store and Google Play

Flutter

React Native

iOS

Android

6.2 Web Applications

Secure, responsive web platforms that run your operations and serve your customers.

- Customer and partner self-service portals
- Management dashboards and reports
- Workflow, approval and request systems
- Corporate websites and e-commerce
- APIs and integration with other systems

React

Next.js

Node.js

.NET

PostgreSQL

6.3 ERP Systems (Odoo)

One connected system for finance, operations, sales, HR and growth, delivered by our Odoo team.

- Implementation, data migration and training
- Custom modules, reports and workflows
- Cloud or on-premise, multi-company and multi-currency
- Ongoing support and upgrades

Accounting

Inventory

Sales & CRM

Purchase

HR & Payroll

Manufacturing

Projects

POS

E-commerce

6. Software Engineering: Custom Software & AI

6.4 Customized Software

Software built around your process, not the other way around.

- Business process automation
- Integration with existing systems and third-party APIs
- Modernization of legacy systems
- Document and archive management
- Development on client request
- Maintenance, support and service levels

WE INTEGRATE WITH

ERP & accounting

HR & payroll

Payment gateways

SMS & WhatsApp

Maps & GPS

Biometric devices

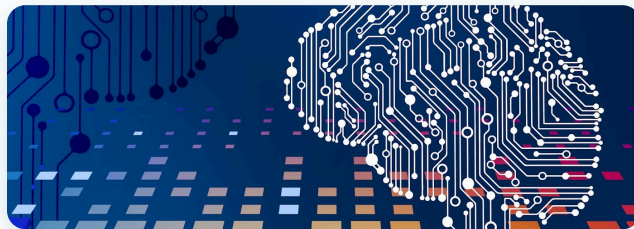

Email & Office 365

Active Directory

6.5 AI Solutions

Practical AI that saves time and improves decisions, built on your own data.

- Chatbots and virtual assistants in Arabic and English, on web and WhatsApp
- Document AI: reading invoices, IDs and forms automatically
- Forecasting for sales, demand and inventory
- Knowledge assistants that search company documents
- Video AI with CCTV: plate recognition, people counting, safety alerts
- AI automation inside Odoo

Support & Maintain

Services: Professional & Managed Services

Project Management

A dedicated project manager, clear plan, weekly reporting and one point of contact from kickoff to handover.

Managed Services

We monitor, maintain and operate your infrastructure so your team can focus on the business.

Annual Maintenance Contracts

Scheduled preventive visits, guaranteed response times and priority repairs under clear service levels.

Training & Knowledge Transfer

Hands-on training for operators, IT staff and end users, with documentation and as-built drawings.

Assessments & Audits

Security, network, data center and fire system assessments with a practical improvement plan.

Supply & Logistics

Genuine equipment from authorized channels, delivered, installed and covered by manufacturer warranty.

Support models

24/7 Support	Continuous help for critical issues and business continuity
On-Call	Dedicated experts ready for urgent escalation
On-Demand	Flexible troubleshooting, updates and optimization

Why Choose SanayaTechs

6

Solution lines under one roof

30

Global technology partners

24/7

Support for critical systems

1

Accountable team from design to support

One Partner, End to End

Data centers, cabling, fire, security, communications and software delivered and supported by one team.

Certified Expertise

Trained engineers and authorized partnerships with leading global manufacturers.

Standards-Based Engineering

Designs that follow TIA-942, NFPA, EN 54 and manufacturer best practice.

Integration Know-How

We connect security, fire, IT and building systems into one operational platform.

Local Presence

Based in Baghdad, with fast on-site response and teams that know the local market.

Long-Term Support

Clear service levels, maintenance contracts and support that continues after go-live.

Meet Our Expert Team

Our team brings together seasoned engineers, developers and project managers with deep expertise across infrastructure, security and software. We combine certified technical skills with practical field experience to deliver systems that work from day one.

Infrastructure & Data Center

Power, cooling, racks and data center engineers.

Network & Cybersecurity

Network, firewall and security specialists.

ELV & Security Systems

Fire alarm, CCTV, access control and intercom engineers.

Software & Odoo

Developers, Odoo consultants and AI specialists.

Project Management

Planners who keep scope, time and quality on track.

Support & Service

Help desk and field engineers for fast response.

Talk to our team

Questions, a new project or a site survey request: our experts are ready to help.

Success Stories

We have delivered technology projects for organizations across Iraq, helping them run more securely, efficiently and reliably. These are the sectors we serve and the results we bring to each.

Government

Data centers, secure networks and CCTV for ministries and public institutions.

Finance & Banking

Secure infrastructure, access control and resilient power for branches and head offices.

Healthcare

Reliable networks, fire alarm, CCTV and IP communication for hospitals and clinics.

Education

Campus networks, structured cabling and surveillance for schools and universities.

Oil & Energy

Rugged micro and prefabricated data centers and perimeter security for remote sites.

Business & Retail

Odoo ERP, IP telephony and smart security for growing companies.

FEATURED PROJECT

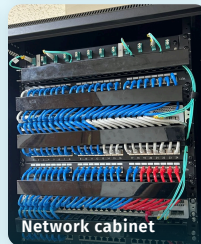

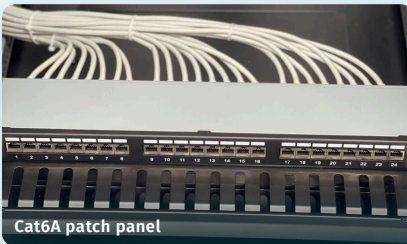

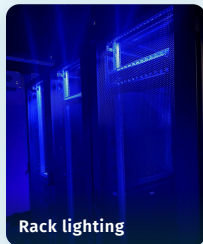

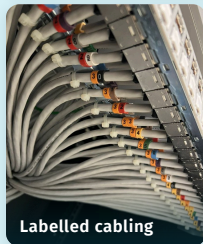

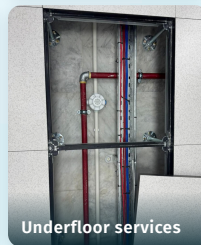

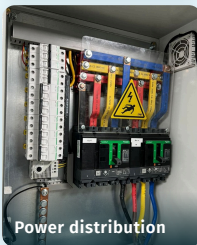

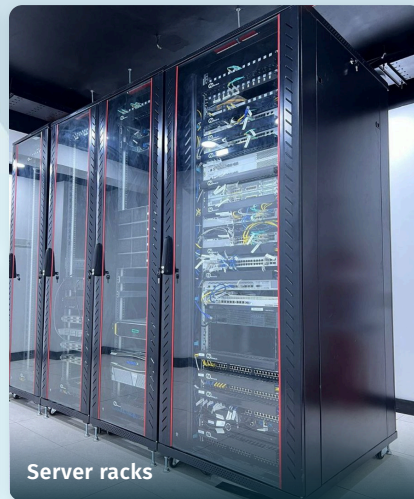

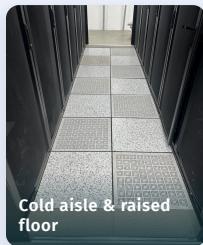

Turnkey Data Center Room

Design and build of a complete server room: racks, power, precision cooling, FM-200 suppression and structured cabling, delivered by SanayaTechs.

Featured Projects

DELIVERED BY SANAYATECHS

Real installations by our engineers: data center containment and racks, UPS and power distribution, FM-200 fire suppression and structured cabling, built to standard and finished with care.

Our Approach

A clear, proven delivery method keeps every project on scope, on time and accountable, from the first meeting to long-term support.

01

Discovery

Understand your business, site and requirements through workshops and site surveys.

You get: Requirements and site survey report

02

Design & Strategy

Engineer the right solution, select vendors and plan budget and timeline.

You get: Design, BOQ and project plan

03

Implementation

Supply, install, configure and integrate with minimal disruption to operations.

You get: Installed and tested system

04

Optimization

Test, tune and train your team so the system performs as designed.

You get: Handover, training and as-built documents

05

Support

Keep systems healthy with maintenance, monitoring and fast response.

You get: Service levels and maintenance plan

Get In Touch

Planning a new facility, upgrading your systems or starting a software project? Tell us what you are building and we will respond with the right team and the right next step.
